Additive Manufacturing - Journal - Elsevier
3D printing and additive manufacturing are essentially the same thing; they're both layer-based manufacturing techniques. Any differentiation is with the application of the individual process and machine, and the end result.

Het verschil tussen 3D printen en Additive Manufacturing?
Additive manufacturing, also known as 3D printing, is a process used to create a physical (or 3D) object by layering materials one by one based on a digital model. Unlike subtractive manufacturing that creates its final product by cutting away from a block of material, additive manufacture adds parts to form its final product.

3D Printing and Additive Manufacturing | Deloitte US
Additive manufacturing, also known as 3D printing, is a transformative approach to industrial production that enables the creation of lighter, stronger parts and systems. It is yet another technological advancement made possible by the transition from analog to digital processes.

3D Printing and Additive Manufacturing

3D printing is a process of building an object one thin layer at a time. It is fundamentally additive rather than subtractive in nature. To many, 3D printing is the singular production of often-ornate objects on a desktop printer. In the early days of 3D printing, the market focused more on consumer intent than industrial value.

Additive Manufacturing is the production of end-use parts or products using 3D Printing. We offer Certified Additive Manufacturing services for high-quality serial production. Wide range of Additive Manufacturing technologies for plastics and metals with custom finishes.

What is Additive Manufacturing? | GE Additive
Additive Manufacturing, Rapid Prototyping en 3D printen hebben in elk geval één ding gemeen; er wordt gebruik gemaakt van een 3D printer. Wat is Rapid Prototyping? Rapid prototyping is een verzamelnaam voor verschillende technieken om snel fysieke prototypen te vervaardigen.

levels and has shortened design and production cycles.. Automotive enthusiasts all over the world are using 3D printed parts to restore old cars.

Additive Manufacturing and 3D Printing! - Supply Chain ... Additive manufacturing is going to disrupt existing supply chains, due to trends like manufacturing on demand, customizing and distributed manufacturing. As a result the revenue models are shifting. Knowledge of additive manufacturing alone is not enough, because AM is part of process.

3D Printing and Additive Manufacturing - Guyson Additive manufacturing is changing the world. Another term for 3D printing, additive manufacturing differs from other forms of manufacturing in that, rather than removing material like machining ...
