Bostick & Sullivan, Inc. > Bostick & Sullivan

The first permanent photograph was created in 1826 by Joseph Nicéphore Niépce. To do this, he coated light sensitive chemicals on a metal plate and exposed it in a camera obscura (a box with a small hole; a "pinhole camera"). Once the plate was properly exposed to light, he used more chemicals to stop the plate from being light sensitive and make the image permanent on the plate.

Alternative Processes Bromoil. In the Bromoil process a silver gelatin print is created. After drying overnight, the paper is bleached and tanned - the tanning process hardens the emulsion relative to the amount of exposure received.

How photography evolved from science to art

File Type PDF Alternative Process Photography And Science Meet At The Getty

The first commercially-available color photography process, Autochrome, was released in 1907 and was based on innovations by Louis Ducos Hauron and Charles Cros. However, these processes proved too expensive for the general public, and it wasn't until Kodachrome film (a more affordable and quicker process) was made available in 1936 that color photography came into widespread public use.

Start to learn alternative photographic processes ...

The term alternative process refers to any non-traditional or non-commercial photographic printing process. Currently the standard analog photographic printing process is the gelatin silver process, and standard digital processes include the pigment print, and digital laser exposures on traditional color photographic paper.. Alternative processes are often called historical, or non-silver ...
