Assignment 4 Solutions 1. Describe an efficient algorithm that, given an undirected connected graph G=(V,E) determines a spanning tree of G whose largest edge weight is as small as possible. Thus, we are not trying to minimize the total weight of all edges of the spanning tree, but just the largest weight of an edge in the spanning tree.

Assignment3_ANSWERS_2016 - UNSW SCHOOL OF MATHEMATICS ...
However, any timetable that has one of each meeting for each class type for each course, is acceptable, and worth 5/7. Only if the timetable minimises the total time for a range of course combinations is the solution worth 7/7. Starting with examples of single courses, for which it is possible to determine an optimal solution ...

Assignment 3 - University of New South Wales
Write a solution that produces a list of all different cases where there are X UNSW courses that share the same course code numbers, where X is passed in as the command line argument. Your solution should run with python3 q2.py [incommon] where incommon is an integer between 2 and 10.
