~~Chapter 8: Circulatory System
Flashcards | Quizlet~~

The cardiovascular system moves blood throughout the body, and the lymphatic system moves lymph, which is a clear fluid that's similar to the plasma in blood. Blood contains nutrients from the foods you eat and oxygen from the air you breathe. It also contains hormones and cells that fight infection.

~~Chapter Cardiovascular System~~

The cardiovascular system consists of the pump and vessels that distribute blood to all areas of the body. This system allows for the delivery of needed substances to the cells of the body as well as for the removal of wastes.

Organs of the cardiovascular system. blood vessels (arteries, capillaries, veins), heart.

physiology of the cardiovascular system. The function of the cardiovascular system is to maintain an adequate supply of blood to all the tissues of the body. This is accomplished by the rhythmic contractions of the heart. -heart rate is controlled by the autonomic nervous system.

I. CARDIOVASCULAR SYSTEM: THE HEART - transport of blood. Heart is a pump that provides pressure to move blood through arteries to capillaries. Capillaries are where we exchange with tissues. Veins return blood to heart. * 2 circuits, so oxygenated & deoxygenated blood won't mix: systemic and pulmonary.

~~Chapter 11—The Cardiovascular System~~
as the rest of the cardiovascular system, and then look at some things that can go awry with the body's essential delivery and trash-removal system. The cardiovascular system, or CV, is a triumph of sophisticated design, but cardiovascular problems are also the predominant cause of death in many developed countries. 324 The Cardiovascular System 11 Unit 4

~~Anatomy and Physiology Chapter 15- Cardiovascular System ...~~

The ___ are formed in red bone marrow and then migrate to tissues throughout the body. These blood cells destroy parasitic organisms and play a major roll in allergic reactions. The bicuspid valve is also known as the ___ valve. The ___ pumps blood into the pulmonary artery, which carries it to the lungs.

~~The Cardiovascular System~~ CHAPTER OUTLINE

The heart and circulatory system make up your cardiovascular system. Your heart works as a pump that pushes blood to the organs, tissues, and cells of your body. Blood delivers oxygen and nutrients to every cell and removes the carbon dioxide and waste products made by those cells.

~~Chapter 2: The Cardiovascular System~~ Flashcards | Quizlet

The circulatory system. (a) The circulatory system consists of a series of vessels that transport blood to and from the heart, the . pump. (b) The circulatory system has two major circuits: the pulmonary circuit, which transports
