(Fundamental Theories of Physics) Jack Vanderlinde. This book claims to bridge the gap between undergrad book and Jackson's. But I do not find it achieved the goal. It contains some good sections and I use it only as a secondary book. I still have to use Jackson's as my primary source.

Solution: The boundary of the integration over the charge distribution is most easily accommodated by working in cylindrical polar coordinates. The field point is located at z^k and the source points have coordinates r and ϕ giving $r - r = z^k - r \cos\phi \hat{i} - r \sin\phi \hat{j}$.
